-- eGistics Selected by EFC Systems, Inc. to Deliver Secure, On-Demand Image Archive and Retrieval for Remote Deposit Capture Users --

DALLAS, March 13, 2006 – Reinforcing its strong position in emerging electronic payments markets, eGistics, Inc. today announced that EFC Systems, Inc., a full-service provider of information technology solutions, is using the eGistics technology platform to provide Remote Deposit Capture customers with on-demand archive and retrieval. This enables users of EFC Systems’ DigiFunds Remote Deposit Capture solution to more securely and cost-effectively archive and retrieve images and data, without costly software upgrades or customization.

“There are two major reasons why on-demand archive and retrieval is a good fit for Remote Deposit Capture users,” said EFC Systems CEO Ernie Chappell. “First and foremost, the eGistics on-demand technology meets the high security and availability standards required by financial institutions and their corporate customers. Additionally, it allows remote capture users to efficiently archive, manage and deliver images and data, without software upgrades or customization. This can only be done cost-effectively with on-demand technology.”

On-demand archive and retrieval through the eGistics technology platform enables remote deposit capture users to efficiently archive and index check images and data, while providing immediate availability when, where and how it is needed. This unique business model eliminates upfront investments in archival hardware and software and requires nominal expense for professional services. It also provides the best possible security in a Remote Deposit Capture environment.

“We are delighted to partner with EFC Systems. They join other leading technology companies who are increasing their solutions’ effectiveness with eGistics on-demand technology,” said Robert E. Lund, eGistics chairman and CEO. “The banking industry’s growing acceptance of on-demand archive and retrieval for electronic payments and Check 21 is just one example of how eGistics is driving the transformation of image and data storage, management and delivery.”

The eGistics on-demand image and data platform strengthens EFC Systems’ leadership in Remote Deposit Capture. Several customers of the combined solution have signed with EFC, and other potential users have been identified.

Designed for mission-critical, data-driven applications, eGistics' Infinite Digital Architecture enables secure, on-demand access to any type of digital content, including images and data. It archives any type of image and related data into an on demand depository, accessible enterprise wide. Content stored in the Infinite Digital Architecture, including data and images remotely captured for electronic deposit, can be securely accessed anytime, anywhere, from any computer with Internet or private telecommunications access.

“Our powerful combination of price performance, flexibility, availability and security has proved to be a unique value proposition and this is what has convinced EFC Systems to enter into an alliance with eGistics,” said Gary Provo, executive vice president at eGistics. “This agreement reinforces eGistics’ position in the emerging markets for ARC, Remote Deposit Capture, and Check 21 as a leading provider of on-demand services for archive and retrieval.”

About EFC Systems, Inc.

EFC Systems is a full-service provider of information technology solutions with over 17 years of experience fulfilling system requirements for the banking, financial, corporate and academic marketplaces. As a solutions developer, EFC Systems provides branch capture and corporate remote deposit solutions to end-users, financial institutions and payment processors.
